## Mount Faber Run

By Sam  
O Level Einstein  
Shelton College International

Mount Faber is the highest mountain in Singapore. It is located in the south of Singapore and its just beside my college. According to a statement distributed by Singapore's government, our students have to run more than 3 kilometers around the island or choose other activities which has equal effects. As a result, our SISCO members established an interesting catch phrase called

*"We are coming, Mount Faber."* 

After walking for a long time along the road, we arrived at the foot of the mountain. It is called a mountain but actually its not much bigger than a hill. Its about a few hundred high. The scenery was not bad and we were surrounded by greenery which seemed to be smiling as the wind blew and it also made the leaves sound happy. The air was crisp and it smelt of ferns. We were surrounded by tall, straight jungle leaves which blocked out most of the sun. The narrow shafts of the suns ray managed to pierce through the gaps in the foliage of the trees. We laughed and talked and our delighted sound lingered in the air.

*After we climbed a few steps, we were greeted by a very tall bridge, one of the tallest in Singapore.*

Although I have been in Singapore for half a year, I have never had the chance to cross this bridge. The scenery on the bridge was beyond my expectation. Taking the broad view, I saw the real beauty of Singapore. There were a few cotton like clouds hovering in the blue sky. We took many photos as we were afraid of missing such a beautiful and specular landscape.

Finally, we arrived at our destination. It was a peaceful and wide place. We played some games there, which made everybody enjoyed themselves. The first game we played was hide-and-seek. We placed several pieces of papers in the grass and some on the trees. On the paper we wrote phrases like "Thank You. Welcome", "Second Prize" and "Third Prize" respectively. I have never seen anyone play hide and seek so intensely.
