## Best Results For 2008 'O' Level Examinations

### Shelton's Hall Of Fame!

*Congratulations to all Shelton students who have done well in the 2008 examinations!*

Language is not a barrier to success. This was proven true by our five top students who came in SCI with bare minimum language proficiency but through their consistent work, perseverance and endurance they managed to get through GCE 'O' level with flying colors.

Their rigorous classroom training for a year has finally paid off. Thanks to their very supportive and highly qualified teachers and mentors who have journeyed with them both in their struggles and in their achievements while at Shelton. Equally important to their successes are their parents who have consistently and openly partnered the teachers in bringing out the best in them.

The 12-month O-level course prepared the students for the Singapore-Cambridge GCE O-Level examinations, the same examinations that local secondary 4 students sit for in the government schools. Their O-level qualification is a widely recognised standard of educational achievement valued by employers, education authorities and institutions of higher education throughout the world. While preparing for their O-Level examinations, they underwent monthly classroom assessments leading up to their final examinations conducted by the Singapore Examinations and Assessments Board (SEAB) in October and November last year. With this qualification, they have various options of progression to a 3-year UK (Hons) degree programme conducted at Shelton in collaboration with Staffordshire University (UK); a University Foundation Studies at universities in the United Kingdom, United State and Australia; the Singapore-Cambridge GCE A-Level; and diploma studies at polytechnics in Singapore.

The whole SCI family once again wishes the successful students a heartfelt congratulations for a well deserved success!
