

Science Fair

Shelton High students from O-levels Einstein, Newton and Bell and A-levels Science Stream showcased their science fair projects on 27 April 2009.

Preparation for the fair started in January. Ms.Sabina Sareena, Head of Science, guided the students in their preparations and in the exhibition held in April. Some of the projects exhibited were Heat Transfer through Different Medium, Water Rocket,Chromatography, Crazy Paper Box, Herbarium, Fruit Battery, Water Purifier, Midget Boat,Mini Volcano and Hydrogen Balloon.

The whole project gave the students the opportunity to test their own hypothesis, to pursue their topic of interest and to further their understanding of the science concepts learnt in the classroom. The exhibition was held right after the school assembly. Teachers and students excitedly scrutinized and tested each project during the presentations. Students in Secondary Three showed their support to their seniors by preparing simple science magic to make the occasion more interactive.

Cheers to the SCI students and the Science Department for a job well done!

Having Fun with Science!
